What's missing From the Assignment?

Unfortunately due time lack of time because some work obligations and some lack in knowledge in certain areas I couldn't complete all the requirements of the assignment at the due time.

The missing are the next:

1. Adding a profile picture.
   - Even though I have all the libraries applied (multer/body-barcer) but still I couldn't get it to work. However, I'm sure the issue is in how I handle the post request in the react part,

2. Handling Backend and DB errors to the Frontend.
   - The DB and backend are complying with all the assignment requirement such as unique username, valid regix email, hashing the password. However, I didn't have enough time to handle those error probably to the frontend and only applied console error catchers. So let's say you added an invalid email it will not add it to the DB however it will just refresh the screen and get you to the user list.

3. Applying the SSL between the frontend and backend.
   - Honestly I didn't have enough time to lock into it

Anyway Regarding of the outcome of that project and interview I want to thank you so much. I have learnt tons of new stuff in the past few days and even though it was extremely frustrating sometimes I still had a lot of fun doing that project.

Regards,
Mohamed Nasr
